

OPENING ADDRESS

DR. J. V. DUNWORTH

Chairman, British Nuclear Energy Society

SIR WILLIAM PENNEY, ladies and gentlemen, the British Nuclear Energy Society is a learned body and not a qualifying one. It was founded under the auspices of the main professional institutions in this country and has been given hospitality by one of those institutions, namely the Institution of Civil Engineers, in whose magnificent building we meet today.

The Society exists primarily to provide an organization for the holding of meetings such as the present one. It has links of friendship with the American Nuclear Society and it has similar aims. The Society has also a close association with and is complementary to the British Nuclear Forum, the latter being concerned primarily with the commercial aspects of nuclear power.

This conference was planned by a small committee under the chairmanship of Dr. T. N. Marsham, U.K.A.E.A., and included Professor G. R. Hall, University of London; Dr. D. J. Littler, C.E.G.B.; Professor W. B. Hall, University of Manchester; and Mr. P. H. W. Wolff, English Electric Company. We are all indebted both to the committee and to the permanent staff of the Society, and also the permanent staff of the Institution of Civil Engineers for the excellent arrangements which have been made for this conference.

When the organizers of this conference approached me some time ago and asked if, as Chairman of the British Nuclear Energy Society, I would say a few words of welcome, I accepted gladly. I did so partly because so many of those who are here today are colleagues and personal friends from the days when I was still concerned with nuclear power in my daily work. To all those people whom I have known very well I say "welcome" and also to those I have not met before, especially to any who are paying their first visit to this country.
